

Requirement Analysis — OZON Web Application (ozon.ru)

Sources: web application (ozon.ru), Ozon Help Center (docs.ozon.ru), Ozon Seller API documentation, official app store listings.

1.Scope

Web storefront for end customers (buyers) at ozon.ru: registration/auth, catalog/search, product page, cart, checkout, payment, order tracking, returns, account management, reviews. Seller/partner back-office (seller.ozon.ru) and Ozon Bank/fintech products are referenced only where they intersect with buyer flows; full analysis of those is out of scope.

2. Actors

Actor	Description
Guest	Unauthenticated visitor; browsing, search, limited cart
Registered Buyer	Authenticated via phone/email/OAuth
Seller (3P)	Marketplace partner; storefront and listings visible to
buyer Ozon (1P)	First-party seller of record for FBO items
Support Operator	Handles disputes, returns, chat

3. Functional Requirements

3.1 Registration & Authentication

- FR-1: User can register via phone number with SMS OTP confirmation.
- FR-2: User can log in via saved phone/email or social OAuth providers(VK ID, Госуслуги, Apple).
- FR-3: The system must support login via email as the standard scenario.
- FR-4: Session persistence across web/app with logout from all devices option.
- FR-5: Account recovery via phone number verification.

3.2 Catalog & Search

- FR-6: Full-text and category-based search across 130M+ SKUs.
- FR-7: Filters by price, brand, rating, delivery speed, location (FBO/FBS/rFBS), seller.
- FR-8: Sort by relevance, price, rating, discount, new arrivals.
- FR-9: Search must return results with autocomplete/spell-correction suggestions.
- FR-10: Search by name, article number, suggestions, or search history, as well as by photo (URL or image).
- FR-11: Category tree navigation with breadcrumb support.

3.3 Product Page

- FR-12: Display price, discount, seller info, delivery ETA and cost, stock availability.
- FR-13: Display variant selectors (size/color) where applicable, updating price/availability without full reload.
- FR-14: Display aggregated rating and customer reviews with photos/videos.
- FR-15: "Add to Cart" and "Buy Now" actions available from product page.
- FR-16: Display seller rating and link to seller storefront.

3.4 Cart & Checkout

- FR-17: Cart persists across sessions for authenticated users.
- FR-18: Cart groups items by delivery method/shipment (multiple sellers > multiple shipments).
- FR-19: Checkout must allow address selection: courier delivery, pickup point (ПБЗ), parcel locker (постамат).
- FR-20: Minimum order value rule enforced for delivery when applicable (address-dependent, per current terms).
- FR-21: Order splitting logic communicated to user before payment (separate shipments/dates).
- FR-22: Promo code / bonus (Ozon coins) application at checkout.

3.5 Payment

- FR-23: Support card payment, SBP, Ozon Card/Ozon Bank balance, cash/card on delivery (where available).
- FR-24: Payment confirmation screen with order number and expected delivery date.
- FR-25: Failed payment must not create a confirmed order; user notified with retry option.

3.6 Order Tracking & Delivery

- FR-26: Order status tracking (processing > shipped > in transit > ready for pickup/delivered).
- FR-27: Push/SMS/email notifications on status changes.
- FR-28: User can cancel order/item before shipment; partial cancellation supported for multi-item orders.
- FR-29: User can reschedule delivery or change pickup point before dispatch, where permitted.

3.7 Returns & Claims

- FR-30: Return initiation from order history with reason selection.
- FR-31: Standard return window per legal/marketplace policy; extended window for Premium subscribers.
- FR-32: Refund status tracking and refund-to-source-of-payment confirmation.

3.8 Account & Profile

- FR-33: Manage saved addresses, payment methods, personal data.
- FR-34: Order history with reorder action.
- FR-35: Manage notification preferences.
- FR-36: Viewing and managing messages

3.9 Reviews & Ratings

- FR-37: Leave a review (text/photo/video/rating) only after confirmed delivery/purchase.
- FR-38: Seller/Ozon response to reviews visible to buyer.
- FR-39: Review moderation prior to publication.

Ambiguities

(3.1 Registration & Authentication)

- What happens if a user enters a number that is already registered in the system? Do we display an error immediately, or do we initiate the login flow by sending an OTP? **(Confirmed)**
- Is it possible to log into an account from different devices simultaneously using the same OTP code while it is still valid? **(Confirmed)**
- Is it possible to cancel the OTP login process and log in to the account using email instead? **(Confirmed)**
- Can I log back into the account using the same OTP code while it is still valid? **(Confirmed)**
- Should "neighboring" browser tabs on the same device be closed? **(Confirmed)**
- Is phone number verification (OTP) alone sufficient to grant full account access, or should the system require additional factors (such as a security question or recovery code) for critical actions like changing the linked phone number? **(Confirmed)**
- How to regain access if the phone number is no longer valid? **(Testable but not executed)**
- Can I link a new phone number while recovering access to my account if I don't have access to the old phone number? **(Testable but not executed)**

(3.2 Catalog & Search)

- If an exact query matches a single SKU but thousands of similar ones exist, how

quickly—and in what order—are they returned? (**Not verifiable externally**)

- Can different products share the same SKU? (**Confirmed**)
- Is it possible to find a product using an outdated SKU? (**Testable but not executed**)
- Is it guaranteed that an exact match for the SKU will appear first? (**Not verifiable externally**)
- What is displayed if no products match the selected filters? (**Confirmed**)
- How is the ranking hierarchy within the catalog determined if two products share identical filter parameters (price, rating, seller, newness, etc.)? (**Not verifiable externally**)
- What are the suggestions based on (search history, popularity)? How are typos handled across different languages? What happens when emojis or special characters are entered? (**Confirmed**)
- How far can breadcrumbs be extended? (**Confirmed**)

(3.3 Product Page)

- Is the estimated delivery time calculated based on the user's current location or the default address? If no address is specified, is an average timeframe or range displayed? (**Confirmed**)
- What happens if the "Add to Cart" button is clicked just as another user has depleted the stock? Is a message displayed immediately, or only after attempting to proceed to checkout? (**Testable but not executed**)
- What is displayed if a seller doesn't have any ratings yet—is the rating hidden, or is a "New Seller" placeholder shown? (**Confirmed**)

(3.4 Cart & Checkout)

- What happens to a saved cart if an item is removed from sale or its price changes by more than N%? Does the user receive a notification upon logging in? (**Confirmed**)
- How is the grouping displayed if the user hasn't selected an address yet - is a preliminary breakdown into shipments based on warehouses or methods shown by default? (**Confirmed**)
- Can a user select different delivery methods for different items within a single order (e.g., courier delivery for one seller and pickup point delivery for another)? If so, how does this affect grouping? (**Confirmed**)
- Is the user informed about the minimum amount before they start filling their cart (e.g., upon entering the cart or selecting an address)? If the amount is below the minimum, is a delivery surcharge offered instead of blocking the checkout process? (**Confirmed**)
- If some shipments are cancelled for any reason after payment, is the delivery date recalculated for the remaining ones, and is the user notified of the change in the "splitting logic"? (**Testable but not executed**)
- How does the system resolve the conflict if two mutually exclusive promo codes are applied (for example, both offering a discount on the same item)? Can a promo code and Ozon coins be combined in a single purchase, and if so, in what order are the discounts applied? (**Testable but not executed**)
- If a user modifies the contents of their cart (adds or removes items) after applying a promo code or coins, is the discount retained, recalculated proportionally, or completely removed? (**Testable but not executed**)

(3.5 Payment)

- Can a user combine multiple payment methods for a single transaction (e.g., paying part with their Ozon balance and the remainder with a card)? **(Testable but not executed)**
- What happens if the user closes the page or loses their connection immediately after a successful payment? Is it possible to view that screen again from the order history, and is the order considered confirmed if the screen was not displayed? **(Testable but not executed)**
- What status does the order retain after a failed payment (e.g., "awaiting payment" or "error")? **(Testable but not executed)**

(3.6 Order Tracking & Delivery)

- How granular are the status updates, especially at transition points? For example, if an order is "ready for pickup" but the holding period at the pickup point is about to expire, does a "pending extension" sub-status appear, or does the order immediately switch to "return" without an intermediate notification? **(Testable but not executed)**
- When items are partially cancelled from an order to which a promo code or bonus coins (FR-21) were applied, is the discount recalculated proportionally, and does this result in a failure to meet the minimum order value for delivery (FR-19) for the remaining items? **(Testable but not executed)**
- What factors determine where changing the pickup point or rescheduling delivery is permitted (e.g., order status, type of logistics partner, product dimensions), and is the user warned that this option is about to become unavailable before that happens? **(Confirmed)**

(3.7 Returns & Claims)

- What is the minimum set of evidence a user must provide for a dispute regarding a missing item (for example, is an unboxing video mandatory), and is there a secondary appeal process if the dispute is automatically rejected? **(Testable but not executed)**
- If a delivery address is being used in an active (not yet completed) order, can the user delete or edit it, and how does this affect shipments that have already been created? **(Confirmed)**

(3.8 Account & Profile)

- When the "reorder" function is used for an order containing items that have since been discontinued, does the system automatically exclude only the unavailable items while keeping the rest, or does it block the reorder entirely? **(Testable but not executed)**

(3.9 Reviews & Ratings)

- Is the reviewer notified when the seller or Ozon posts a public response, and can the user comment on that response (creating a thread), or is the dialogue always limited to a single reply from the seller? **(Confirmed)**

4.Non-Functional Requirements

Category	Requirement
Performance web-vitals	Product/search pages should render key content within acceptable thresholds (LCP, CLS) under normal load
Scalability	Must sustain peak load during sales events (e.g., seasonal promo days) without checkout degradation
Availability	Checkout and payment paths require high availability (target 99.9%+); read-only catalog can tolerate degraded mode
Localization	Russian-language primary locale; regional pricing/delivery variance by geography
Compatibility	Support for major desktop/mobile browsers; responsive layout for mobile web in addition to native apps
Accessibility	Basic WCAG-aligned support (contrast, keyboard navigation) — not confirmed as formally certified
Data integrity	Cart/order state must remain consistent across concurrent sessions/devices

5. Assumptions

- A-1: Business rules (minimum order value, return windows, fees) change periodically; this document reflects publicly observed values as of mid-2026 and must be revalidated against live terms before use in test design.
- A-2: Seller-fulfilled (FBS/rFBS) and Ozon-fulfilled (FBO) items may have different SLAs for the same buyer-facing flow.
- A-3: Some features (installment payment, cash on delivery) are conditional on region/category and not universally available.

6. Constraints

- C-1: No access to internal architecture, backlog, or acceptance criteria — analysis is externally observed behavior only.
- C-2: Legal/commercial terms (Premium pricing, fees) are controlled by Ozon and can change without prior notice.
- C-3: Analysis excludes seller back-office, logistics/warehouse systems, and internal admin tooling.

7. Out of Scope

- Ozon Seller/Partner portal functional requirements
- Ozon Bank/fintech product requirements beyond checkout payment method
- Ozon Travel, Ozon Fresh as standalone verticals
- Native mobile app-specific requirements (push architecture, deep links)

8. Acceptance Criteria (Definition of Analysis Complete)

- Each functional area above is testable via at least one positive and one negative scenario.
- Non-functional requirements have at least one measurable threshold or explicit "not verifiable externally" note.
- All assumptions are flagged as such and not treated as confirmed specifications.

9. Open Questions / Risks for Test Planning

- Exact current numeric thresholds (minimum order value, return window days, subscription price) must be pulled from the live UI/terms page at test-design time
— do not hardcode values from this document into test cases.
- Behavior under seller/Ozon fulfillment mix within a single cart needs live verification (may have changed since last observation).
- Regional variance (delivery options, payment methods) requires geo-specific test data, not a single fixed test account/region.
