

Test Progress Report

OZON web application (ozon.ru)

Report version: 1.0 **Date of preparation:** 17.08.2026 **Reporting period:** 20.07.2026 – 10.08.2026

Author: Artyom Makarevich (QA, independent project)

⚠ **Disclaimer: Must be read before using this document.** Testing was conducted without the product owner's (Ozon) authorization, a contract, or an NDA. This does not constitute an official product acceptance process and cannot serve as a substitute for one. Certain actions performed (e.g., claims/returns, reviews, seller chat inquiries) entail actual legal and ethical risks.

This document is for educational or demonstration purposes only and must not be published under the Ozon brand without legal review and/or the rights holder's consent.

1. Summary

During the reporting period, a full cycle of QA artifacts for the web version of OZON was produced on a self-initiated basis: requirements analysis (39 functional requirements, FR-1-FR-39), a test plan, a test case repository (37 cases, Qase), and a manual execution checklist (132 checks across 3 browsers: Firefox, Chrome, Edge.).

Key figures:

- Checks performed: **132**
- Passed: **112 (84,85%)**
- Failed: **5 (3,78%)**
- Skipped: **15 (11,4%)**

Key findings:

1. Core user scenarios (registration, search, catalog, and checkout - excluding payment) are functioning reliably; the completion rate is high, and no cross-browser discrepancies were found (all six defects reproduce identically across all three browsers, indicating logic or layout bugs rather than compatibility issues).
2. One defect constituting a direct violation of a functional requirement has been found: FR-13 is not met- option selectors (size/color) do not update the price or availability without a page reload.

2. Test Team

Role	Members	Area of responsibility
QA Engineer / автор всех артефактов	Artyom Makarevich	Requirement Analysis, Test Plan, Test Cases, Checklist execution, report

3. Testing Process Description

1. A requirements analysis document has been prepared covering nine functional areas (registration, catalog/search, product page, cart/checkout, payment, order tracking, returns/claims, account, reviews), plus non-functional requirements (NFRs) and a list of open questions (ambiguities).
 2. A Test Plan has been developed, covering test scope, out-of-scope items, strategy (equivalence classes, decision tables, pairwise, use-case testing), entry/exit criteria, and risks.
 3. 37 test cases were designed in Qase (smoke/regression, E2E/API levels), including priorities and severity ratings.
- A manual walkthrough of a 132-item checklist was performed across three desktop browsers (Windows 11: Firefox 153, Chrome, and Edge).

4. Timetable

Date	Событие
20.07.2026	Requirement Analysis v1.0
23.07.2026	Checklist run (132 checks, 3 browsers)
By August 10, 2026:	Finalization of the test case repository
	(Qase, 37cases) August 17, 2026: Preparation of the final report

5. New Defects Statistics

Severity	Modules
Critical 0	—
Major 1	Catalog and search; Product page
Normal 1	Cart & checkout
Minor 2	Sign Up/Log In; Personal Account

Status	quantity
Open	5

Important: The Severity/Priority levels below represent the assessment of the QA engineer who authored the report, not a classification agreed upon with the product owner (as such information is inaccessible without access to the backlog). This is not a final prioritization, but rather a recommendation for consideration.

6. New Defects List

ID	Module	Summary	Severity	Priority	browsers	Related requirement
DEF-1	Registration - Email	Clear button does not clear the email input field	Minor	Low	Firefox, Chrome, Edge	FR-3
DEF-2	Catalog and search	In the "Каталог" drop-down menu, it is not possible to open each category directly in the main window.	Major	Medium	Firefox, Chrome, Edge	FR-11
DEF-3	Product page	Product option selectors (size/color) do not update the price and availability without a full page reload—a direct violation of the stated requirement.	Major	High	Firefox, Chrome, Edge	FR-13

DE F-4	Cart & Checkout	Information regarding the minimum order amount or free delivery is not displayed during the early stages (in the cart or when selecting an address); the user only learns of the restriction at the point where the checkout process is blocked.	Normal	Medium	Firefox, Chrome, Edge	FR-20
DE F-5	Personal Account — Messages	The "Отметить все прочитанными" button does not remove the unread message indicator without restarting the app or reloading the page.	Minor	Low	Firefox, Chrome, Edge	FR-36

7. Overall Defects Statistics

Module	Total inspections	Passed	Failed	Skipped	% Passed
Registration and authorization	24	21	1	2	87,5%
Catalog and search	33	32	1	0	97,0%
Product page	6	5	1	0	83,3%
Cart and Checkout	15	12	1	2	80,0%
Payment	20	13	0	7	65,0%
Order tracking and delivery	6	4	0	2	66,7%
Returns and Claims	9	7	0	2	77,8%
Personal Account	8	7	1	0	87,5%

Reviews and ratings	2	2	0	0	100%
Non-functional requirements	9	9	0	0	100%
Total	132	112	5	15	84,85%
